## BIOHAZARD REVELATIONS NAVIGATION AND ART BOOK

### PROLOGUE (Page 002)

*2005, on the Mediterranean Sea.....*

*In the midst of a pitch-black night and a violent thunderstorm, a tugboat makes its way through the raging waves. On board is Jill Valentine, who is on a search and rescue mission.*

*The ship that looms before them is the luxury liner, Queen Zenobia. However, the majesty of the queen that once sailed the world gracefully is nowhere to be seen, and the ship has taken on a hideous appearance befitting a ghost ship.*

*As she approached the ghost ship, Jill murmured to herself. "I'm sure they are somewhere on this ship..."*

*But this disappearance was only the beginning of the nightmare.*

*And what they don't yet know is that they are being held captive by an unfathomable conspiracy swirling from behind the scenes...*

### CHARACTER (PAGES 6-14)

#### JILL VALENTINE

A founder and member of the BSAA since its inception, an NGO set up by the Federation of Pharmaceutical Companies. She is one of the few survivors of the Raccoon City Incident. Following the destruction of Umbrella in 2003, she and Chris joined the BSAA in search of a

place to fight against bioweapons that had been leaked onto the black market. This time, after receiving a report that Chris has disappeared, she joins the mission to infiltrate the Queen Zenobia. But she does not yet know she is being lured by a great wave of conspiracy...

#### **PARKER LUCIANI**

British-Italian. Jill's new partner in the mission to infiltrate Queen Zenobia. He is known for his single-minded and uncompromising investigations. Although he tries to act cool and collected, he is also a lovable and passionate man who cannot hide his earnest and clumsy side. He was transferred from the FBC to the BSAA after an incident that occurred a year ago. That incident seems to be closely related to current events....

#### **CHRIS REDFIELD**

He was one of the founding members of the BSAA. He has been a comrade in arms with Jill since the Mansion Incident at the Arklay Laboratories in 1998 during the STARS era. He is a tough guy who has fought many battles against biohazards and bio-terrorism, but he mysteriously disappeared while investigating information about a large-scale bio-terrorism plan that was secretly brought to the attention of the BSAA. ....

#### **JESSICA SHERAWAT**

A female agent with a former background in the FBC. This time, she was working with Chris on a bioterrorism investigation, but they both disappeared. She doesn't try to hide her individuality, as evidenced by her extravagant outfits. Jessica's boredom and thrill-seeking behaviour can sometimes create conflict in organisations like the BSAA, but she is wise enough not to let this happen, perhaps because she knows certain dangers can make a woman more attractive.

#### **KEITH LUMLEY**

A smooth-talker and something of a ladies' man. He has been given the nickname 'Grinder' (meaning 'Womaniser') and whenever he is seen in private, he is said to have a different woman accompanying him. However, his skills are well known, and he has been selected as a member of the BSAA for his distinguished service record in various elite special mercenary units. Quint, who is shy around women and an indoor enthusiast, is a good foil, and their daily banter has become a hobby for Keith.

#### **QUINT CETCHAM**

He is the BSAA's ultimate technical geek, but he is also a scientist and analyst specialising in biological weapons. His bio scanner, code-named 'Genesis', which incorporates vast amounts of genetic data and virus samples, is a prototype developed by the Federation of Pharmaceutical Companies (FPC), based on his idea. He is a horror movie freak and likes to compare everything to movies. He and Keith have contrasting personalities and argue constantly, but in reality, they are a good team who complement each other.

#### **CLIVE R. O'BRIAN**

The current head of the BSAA. During the unprecedented bio-terrorism incident 'Terragrugia Panic' in 2004, he was dispatched to the site as the only observer of the BSAA in response to a request from the European camp, protesting against the excessive actions of the FBC in dealing with the situation. He may look a little sloppy, but in reality, he is a sharp man with both political and practical skills. He is able to keep his team, all of whom have their own peculiarities, in line.

### RAYMOND VESTER

He is an acclaimed agent who has rapidly risen to prominence in the elite ranks of the FBC. However, he does not hesitate to use any means necessary to ensure success, and his aggressive investigative skills have been criticised in many places. Naturally he has come into conflict with the BSAA on numerous occasions, and his blatant sabotage has prevented the BSAA from intervening in several investigations. A year ago, he was Parker's direct subordinate. But after Parker's transfer, what happened to him... there is no way of knowing.

### MORGAN LANSDALE

His nickname is "The Silver Fox" because of his silver hair, which reflects his ruthlessness. His background as an advisor to the Federation of Pharmaceutical Companies led to his selection as the first director of the FBC. He has been a leading voice in Congress on the dangers of bioterrorism and the need to empower specialised agencies to deal with it and was at the forefront of the Terragrigia Panic and the efforts to bring that situation under control. With his unmistakably strong will and leadership, he has turned the FBC into the world's largest bioterrorist organisation in both name and reality.

### RACHAEL

A mysterious woman is holding her arm, looking hurt. She's wearing a wet suit like Jill, but is she a friend of Jill's? And what fate awaits her on the Ghost Ship? .....

### GAS MASK

A mysterious man in a gas mask hiding his true identity. His appearance reminds everyone of Veltro, the figure who issued a statement for the crime of the "Terragrigia Panic". Is this man really the ghost of Veltro haunting the Ghost Ship...?

### JACK NORMAN

He is the leader of the international terrorist organization "Veltro" and is said to be the mastermind responsible for the "Terragrigia Panic" in 2004. He is said to have united the armed cult group with his overwhelming charisma, but his identity is shrouded in mystery. After the events of the Terragrigia Panic, the FBC continued its efforts to eliminate Veltro. A few months later, it was announced that the Veltro had been destroyed in a covert operation. At the same time, the FBC declared that Norman had been found dead.

### CREATURE: (Pages 15-17)

#### OOZE

This bizarre creature, which means "dripping thing," is the end result of a human body infected with t-Abyss. Once inside the body, the virus fuses with cell membranes and begins to absorb excessive amounts of water. As a result, the cell membrane swells abnormally due to osmotic pressure and eventually fuses with the surrounding cell membrane as if it were melting. As a result of this repeated process throughout the human body, the infected body becomes white and blistered like a drowned corpse that has been dead for a long time, and the body becomes half liquefied. As the Abyss continues to multiply, it urges the host's body to seek more water and nutrients. It is this urge that drives the ooze on to sip and absorb the fluids of its prey.

#### GLOBSTER

Mysterious lumps of flesh (blob) that have washed ashore in large numbers on the Mediterranean coast. The term 'Globster' is an abbreviation for 'Grotesque Blob Monster' and

is a general term for unidentified objects that have been found drifting around the world. In other words, nothing is known about what this Globster is.

### FENRIR

Developed with the prospect for deployment in the mountains. Although it is less controllable than the Doberman-based B.O.W. Cerberus, they stand out in terms of their wild nature and combat power. The wolf-like characteristics is strongly preserved in the Fenrir, and they hunt in packs. They do not attack their prey all at once. Instead, they surround it in packs, cut off its retreat, then watch it weaken from afar and then slowly kill it. The howling of the Fenrir echoing in the mountains is the signal for the start of the hunt.

### HUNTER

A combat-type B.O.W. with long, sharp claws and scaled skin covering its entire body. It was created by combining the DNA of a fertilised human egg with that of a reptile through the power of the t-Virus. Its appearance is somewhere between that of a human and a reptile, giving it a distinctly eerie appearance. They have amazing agility and leaping power, and their ability to hunt down and kill their attackers is worthy of the name 'Hunter'. It has been successfully mass-produced, and a variety of variants have been developed.

### FARFARELLO

The name Farfarello (Slanderer) is derived from one of the twelve demons called the Malebranche (evil claws) in Dante Alighieri's Divine Comedy. The Farfarello is an improved version of the Hunter with the addition of t-Abyss. As a result, it has the ability to mimic some aquatic creatures, allowing it to blend into its surroundings and become invisible. However, it has been reported that the administration of multiple viruses has increased aggressiveness and significantly deteriorates capacity for control compared to previously.

### GHIOZZO

Fish infected with t-Abyss transform into a ferocious carnivorous fish known as a 'Ghiozzo'. Its appearance closely resembles the deep-sea fish that was host to the marine-pathogenic 'The Abyss' virus at the time of its discovery, upon which the t-Abyss is based. Due to the effects of the virus, they have an extremely voracious appetite, and their sharp fangs and powerful jaw muscles allow them to bite and crush everything in their path. The aggression of the famous piranha is a fiction made for the cinema, but a school of Ghiozzo could devour a large mammal to the bone in a matter of seconds.

### SEA CREEPER

The Sea Creeper, a special variant of a human body infected with t-Abyss, is a literal water monster. This peculiar transformation is symptomatic of a predominantly female infected subject, and the term "she" is an apt description of the Sea Creeper. The carapace covering their entire body, reminiscent of a woman's hair, dampens friction to an absolute minimum, and they can creep out of the water without making a sound. As soon as they are close to their prey, they open their hands, divided into six limbs, and embrace their prey as they feed. There is no way of escaping this love which is reminiscent of a mother embracing her child.

### SCAGDEAD

The Scagdead is mutated species of Ooze. The t-Abyss is highly infectious, and some cases have been known to mutate within hours of infection, but there are rare cases (about one in a thousand people) where the human subject is resistant to the virus. However, this resistance only slows down the progression of the virus, it does not stop it. A few days to weeks after

infection, an intense fever develops, and an itchy swelling occurs in the shoulders and neck. As it swells, the subject's consciousness begins to fall apart. The infected person is aware he or she is being taken over, but there is nothing they can do about it. The head of the original host, who still speaks incomprehensibly after being taken over by the madness of the virus, has an eerie quality, reminiscent of a sleepwalker.

#### OOZE RACHEL

Is this a mutated version of Rachel, the woman who was attacked by the Ooze on the ship.....? Perhaps because it has only been a short time since her infection, she has retained some semblance of her appearance, but the disfigured arms and other parts of her face show the tremendous mutation power of the virus. She seems to have no consciousness as a human being.

## BIOHAZARD REVELATIONS OFFICIAL GUIDEBOOK

### PROLOGUE (Pages 002-003)

*The massive terrorist attack on the maritime city of Terragrigia one year ago.*

*The silent luxury liner Queen Zenobia.*

*What are the implications behind these two biohazards?*

*The year was 2004, and the terrorist organisation Veltro had attacked Terragrigia, an artificial maritime city built on the Mediterranean coast. The city, with its advanced technologies such as solar power production, ironically became the target of advanced terrorism using B.O.W.s (Bio-Organic Weapons). The horrors of bio-terrorism were etched in the minds of the people around the world when they saw the ruins of Terragrigia.*

*The year is 2005. Jill is informed of the disappearance of her former partner, Chris. Jill, along with her new partner, Parker, head for the Queen Zenobia, the luxury liner where Chris was reported lost. What awaits them is the terrorist organisation Veltro. Veltro are after a virus called 't-Abyss' which is capable of contaminating one fifth of the world's oceans. Chris has disappeared and Jill is chasing him as a complex, intertwined story unravels and reveals the one truth.*

#### JILL VALENTINE

Jill was involved in the 'Mansion Incident', the world's first viral biohazard in the Arklay Mountains, and has been a member of the BSAA since its inception. She is one of the 'Original Eleven', a woman with a strong heart and a strong sense of justice who has solved countless biohazards in the field. She is going after Chris and infiltrates the Queen Zenobia.

#### CHRIS REDFIELD

A former STARS member who, like Jill, was involved in the Mansion Incident and is one of the BSAA's Original Eleven. He is a tough guy who can accomplish any difficult mission. A professional with firearms, combat, and counter-bioterrorism, he and Jessica went to investigate the snowy mountains...

### **PARKER LUCIANI**

A former FBC agent who was present at the Terragrigia Panic, a major bioterrorist attack. He is now a member of the BSAA and is working alongside Jill on this mission. He is a cynical but passionate individual and has a serious personality to compromise. He and Jessica have known each other since their days in the FBC.

### **JESSICA SHERAWAT**

A former FBC agent who, like Parker, was involved in the Terragrigia Panic. She was later transferred to the BSAA and teamed up with Chris for this mission, heading into the snowy mountains. She is an expert with a rifle and specialises in logistical support. She is fond of Chris and has tried approaching him several times but is yet to succeed.

### **KEITH LUMLEY**

A member of the BSAA. He is an excellent agent and specialises in assault missions. In C.C. (close combat), he is particularly fond of wielding dual bladed weapons known as 'Kukri' knives. He has tattoos all over his body and is a smooth talker with a light-hearted attitude. He is very good at what he does.

### **QUINT CETCHAM**

He is a member of the BSAA who works with Keith. He does everything from cryptography to programming, bomb disposal, and engineering. He is also deeply involved in the development of Genesis. In his private life, he is a big movie buff and a self-confessed mecha geek.

### **CLIVE R. O'BRIAN**

The current head of the BSAA. He is responsible for co-ordinating Jill and the other individual members. In contrast to his aloof manner and friendly appearance, he is an excellent commander with a clear intellect and decisiveness.

### **RAYMOND VESTER**

A mysterious man who reveals himself in front of Jill and her partner on the luxury cruise ship, Queen Zenobia. He has a calm appearance, a keen eye, and the mannerisms of an agent. He seems to be acquainted with Parker...

### **MORGAN LANSDALE**

He is the Commissioner and highest authority within the F.B.C., another anti-bioterrorism organisation. He is often criticised for his heavy-handed, hard-line approach to bioterrorism, but it is difficult to argue with his track record and leadership. He is often at odds with O'Brian.

### **THE TERRORIST GROUP VELTRO**

A group of patriots that converted to urban guerrillas for the purpose of terrorism. The group made a name for itself during the 2004 'Terragrigia Panic'. Their trademark is the gas mask.

### **THE HUMAN ORGANISATIONS FIGHTING AGAINST B.O.W.S.**

#### **B.S.A.A. (Bioterrorism Security Assessment Alliance)**

An organisation established to combat the threat of biological weapons that have spread throughout the world following the collapse of the giant Umbrella Corporation. In the event of an emergency, the organisation will act as an observer in national military and police operations against bioterrorism. However, the spread of bioterrorism has been greater than expected, and the methods of dealing with it are approaching their limits.

#### **F.B.C. (Federal Bioterrorism Commission)**

The Federal Commission on Bioterrorism was established by the United States. Although the structure and philosophy of the unit is the same as the BSAA, some media outlets have pointed out problems with the unit, such as its ideological bias because it is based in a single country, and the fact that the unit's dispatch to other nations may indicate a political agenda.

#### **CREATURE (Pages 042-61)**

##### **OOZE**

The end result of a person infected with t-Abyss. They are white and puffy like a drowned corpse, and their flesh is half-liquified. It moves slowly, but tends to approach the player relentlessly, and if you don't kill them before they get too close, you will struggle.

##### **OOZE PINCER**

A variant of Ooze with mutated scissor-like arms. They tend to have more HP than a regular Ooze, and their scissor-like arms have a wide range of attacks. As with regular Ooze, repelling before they get too close is the best theory of confrontation.

##### **OOZE TRICORN**

A subspecies of the Ooze. It is called a tricorn because its head is shaped like the triangular hat used by the Navy. It shoots projectiles in a straight line from its enlarged right arm, so you cannot be too careful, even when at a distance.

##### **OOZE CHUNK**

Although it is a variant of Ooze, its upper body has expanded abnormally, and it no longer retains its original form. When approaching the player, it has a habit of bursting its own body and attacking its surroundings, so it is best to refrain from carelessly approaching.

##### **OOZE RACHEL**

Rachel, the woman attacked on board ship, became infected and mutated. Perhaps because of the short period of time she was infected, she still retains some semblance of humanity, but she is not conscious as a person. She is more physically powerful than a normal Ooze and will sometimes rush at the player.

##### **GLOBSTER**

Globster is an abbreviation for 'Grotesque Blob Monster' and refers to unidentified flotsam that have been found around the world. Most are already dead, but there are some that suddenly start to move, so do not carelessly approach them.

##### **FENRIR**

This type of B.O.W. was developed with the idea of deployment in the mountains. It retains many of its original characteristics, calling to its companions with a howl and hunting in packs. Although not physically imposing, they use their powerful legs to pounce on you, so you need to watch their movements carefully.

##### **GHIOZZO**

A fish that has been infected with t-Abyss and mutated into a ferocious carnivore. They have a voracious appetite due to the effects of the virus and can chew through anything with their

sharp fangs and powerful jaw muscles. They often appear in groups, but their individual strength and aggression is low, making them easy to deal with.

#### **SEA CREEPER**

A special mutation of the human body infected with t-Abyss that lives in the water. It creeps noiselessly through the water, making good use of the carapace that covers its entire body, reminiscent of long hair. It is very difficult to avoid a surprise attack when it jumps out of the water.

#### **HUNTER**

A combat-type B.O.W. developed based on a reptile. Its entire body is covered with a thick, skin-like coating and it uses long, sharp claws as weapons. It is incredibly agile and can bring its attackers to the brink of certain death. It is very important to take the initiative and repel them back.

#### **FARAFELLO**

This B.O.W. was developed by adding t-Abyss to a Hunter. It has the ability to mimic and approach whilst invisible. Its name comes from one of the twelve demons in Dante's Divine Comedy. If you cannot determine its position, you will inevitably have a tough battle.

#### **SCAGDEAD**

The Scagdead are a mutated form of Ooze. Originally resistant to a rare virus, the infected can barely speak without being aware of it, and their appearance is reminiscent of sleepwalkers. It has the amazing ability to swallow the player whole in an instant death attack.

#### **SCARMIGLIONE**

B.O.W. developed using shark DNA. The durability of its protruding, spear-like arms is comparable to that of the frontal plating on an armoured car and can be used either as a piercing weapon or as a shield for invincible defence. It is a special creature with contrasting durability in the upper and lower parts of its body.

#### **DRAGHIGNAZZO**

This strange creature is a colony of countless individuals that have gathered together. Like the Ascidiacea sea squirt, it reproduces asexually, with individual organisms separating to form clones. They secrete a unique calcium content and are covered with a tough epidermis, allowing them to easily repel their attackers.

#### **MALACODA**

It is an enlarged form of an aquatic organism infected with a virus and has a long, eel-like body. They live in groups in the water and can also parasitise other organisms and remain active inside them. They can be killed quickly by targeting the head rather than the body.

#### **NORMAN**

The mutated form of Norman, leader of the international terrorist organisation Veltro, who injected a virus into his own body. He has the ability to disorientate people with his eyes and deprive them of normal judgement. If you cannot see through his hallucinations, you will not stand a chance.

## JESSICA'S REPORT

It happened in 2004 in Terragrigia, the "Megafloat" city on the Mediterranean coast when the rains of the t-Abyss virus dispersed from an unmanned aerial vehicle and the deployment into the city of biological weapons transformed a maritime utopia into a hell on earth. The organisation claiming responsibility appeared in Dante's Divine Comedy, but how did these internationally obscure terrorists, referring to themselves as 'Veltro' after the great hound, come to acquire biological weapons?

The circumstances are still unknown, but at the time, our knowledge of Veltro was limited to that of a radicalised guerrilla group that had developed from a student movement, and their statement claimed it was a terrorist act of protest against development.

Whether that was true or not, we'll never know. This unprecedented act of bioterrorism, which transformed the world's values, was dubbed the 'Terragrigia Panic' by the mass media, and the name 'Terragrigia' was forever etched in the hearts and minds of the people, synonymous with sorrow.

One year on...

The BSAA has received a leak from a highly creditable source. It was enough to convince us of a terrorist plot that could be happening in the very near future and there was reason to suspect Veltro's involvement.

That should have been impossible. The official story was that the FBC had identified their hideout and that a clean-up operation had resulted in the deaths of all the principle Veltro members.

But there was in fact, one exception. Jack Norman, the alleged leader of the group. According to some accounts, this man's body has never been found. This is information that has never been made public. Jack Norman, who is said to have led Veltro with overwhelming charisma... The footage he left behind at the time of his declaration was used to raise him up as a martyr by certain extremists, and even now it is distributed on video-sharing websites.

In any case, we need to act immediately and uncover the truth of this information ourselves. We cannot afford a second tragedy.

BSAA\_Agent\_Data\_01.wav

*Auditor: Agent Interview Record Subject Jessica Sherawat. Recorded by the Special Auditor of the Federation of Pharmaceutical Companies.*

*Auditor: I'd like to know about the agents involved in this mission.*

*Jessica: Is it okay if I speak subjectively?*

*Auditor: Yes, feel free to speak your mind.*

Jessica: *Chris Redfield... One of the Original Eleven, a founding member of the B.S.A.A. He has excellent marksmanship and close quarters combat skills. As former member of the U.S. Air Force, he is also a skilled aircraft pilot.*

Auditor: *Have you ever teamed up with him?*

Jessica: *No, this is my first mission. But he's the right man for the job, don't you think? I've got his back, he's got mine. 'Jessica, are you okay?' 'Yes, Chris. I'm fine.' It will be like a scene from a Hollywood movie.*

Auditor: *Next, tell me about his background.*

Jessica: *Chris's fight against bio-weapons began in 1998 at the Umbrella Arklay Laboratory. A leak of the t-Virus triggered the so-called 'Mansion Incident'.*

Auditor: *His S.T.A.R.S. days with the Raccoon City Police Department. The Federation noted that was one of the most important times of his career.*

Jessica: *He is a real-life hero, but without the cape and mask. Battle after battle, he always survived, and he did so with a vengeance, before finally destroying Umbrella. His record is one of the finest in the B.S.A.A.*

Auditor: *As a member of the Federation of Pharmaceutical Companies, I am indebted to him. If he had not hunted down Umbrella, we'd have a much bigger problem on our hands.*

Jessica: *That is why the Federation established the B.S.A.A. and invited Chris to be a member...*

Auditor: *Yes, we needed an organisation that could take on bioterrorism and the responsibility should lie with those who possess the necessary skills.*

Jessica: *Jill Valentine... She is another of the 'Original 11', and like Chris, is from S.T.A.R.S. She is skilled in the use of heavy weaponry and combat proficient. She can even use lock picks to crack simple locks. Oh yeah, I hear she has also got some bomb disposal skills too. I have to admit, I am not a fan of Jill's 'good-guy' persona, but I do admire her talents. Work is not the same as friendship, so it shouldn't be a problem, right?*

Auditor: *All right. So long as you deliver, we've got no problem with that.*

Auditor: *Jill Valentine is one of the survivors of the Raccoon City disaster, right?*

Jessica: *Yes. After the mansion incident, she stayed behind in Raccoon City to continue her own investigation. It wasn't until two months later that the entire city was hit by a biohazard. Though the t-virus was pretty much wiped clean according to the official word...*

Auditor: *At the time, it was not in anyone's best interests for the existence of biological weapons to become public knowledge.*

Jessica: *'Anyone...' Of course, that applies to the government, too, because the missiles they launched in the name of the Sterilisation Operation obliterated the city shortly after she escaped Raccoon City... I'm sure she will never forget that moment.*

Auditor: *Because you experienced the same thing?*

Jessica: *Yes, although all I could feel back then was helplessness.*

Jessica: *Parker Luciani. He is a former F.B.C. agent.*

Auditor: *Then he is just like you.*

Jessica: *He is a colleague of mine from the F.B.C., which means, for better or worse... I know him well. He is... stubborn and inflexible. Sorry for the inappropriate expression, but to put it bluntly, he is fucking awkward.*

Auditor: *I see... So why did he join the B.S.A.A.?*

Jessica: *Parker transferred to the B.S.A.A. a year ago because of... and I'm sure you know by now, it was the Terragrigia Panic. There is no denying the fact that decisions were made in the field there to save face at the F.B.C., and he was troubled by that. There were times when he tried to drown his problems with alcohol, but then he concluded that he needed to fight more to protect the people, so he joined the B.S.A.A.*

Auditor: *You are right. He is fucking awkward.*

Jessica: *And that is what is so cute about him, really.*

Jessica: *Keith Lumley and Quint Cetcham. These two are easier to explain together.*

Auditor: *No problem. Speak of them collectively.*

Jessica: *Indoor and outdoor. Thinker and doer. Cautious and impulsive. To understand them, try and pair up every single opposite you can think of. Quint, a mechanical geek with a background in intelligence analysis. And Keith, trained in live-combat and a battle-hardened Special Forces mercenary. They don't always see eye to eye, and they always seem to be bickering, but they are at their best when they are working together.*

Auditor: *They naturally compensate for each other's shortcomings... And that makes them the perfect team.*

Jessica: *Clive R. O'Brian, head of the B.S.A.A. He is taking direct charge of this operation, so everyone is a little on edge.*

Auditor: *That's unusual. He's rarely been in direct command before.*

Jessica: *He prefers to stay behind the scenes. "Do not let the left hand know what the right hand has done." That's what O'Brian used to say.*

Auditor: *"Mathew 6:3" from the bible... The motive to seek fame, is impure in itself.*

Jessica: *Not only that, but “the wise keep silent.” He appears aloof and unguarded, but he never shows his hands. He may be rough around the edges, and he does dress sloppily, but he is actually quite cunning.*

Auditor: *It is hard to lead the B.S.A.A. if you are not. I believe he was the only one from the B.S.A.A. deployed to the area during the Terragrigia Panic. I’m told he had a falling out with the F.B.C. over how to resolve it.*

Jessica: *I don’t know. At the very least, the F.B.C. had on-site command and it is safe to say that O’Brian’s opinions as an observer were largely ignored.*

Auditor: *Can you also speak about the F.B.C.?*

Jessica: *Yes.*

Jessica: *The Federal Bioterrorism Commission, a United States anti-bioterrorism unit. Director Morgan Lansdale is the first and only director to date, meaning his power within the F.B.C. is absolute.*

Auditor: *You could say he is dictorial. At the F.B.C., no action, no matter how insignificant, happens without his approval. On the other hand, I am sure there are plenty of facts that only he alone knows.*

Jessica: *Nevertheless, from his results, the F.B.C. is now the largest anti-bioterrorist organisation in the world and it was only through the determined will of Morgan Lansdale that it was able to win over public opinion to the threat of bioterrorism and get Congress to approve a major strengthening of the organisation.*

Jessica: *Raymond Vester, F.B.C. agent. When Parker and I were at the F.B.C., he was just a rookie, a cute, junior agent. I still hear rumours now and then, but..*

Auditor: *I don’t hear good things about him. Heavy-handed investigations, exclusionary and uncooperative with local police, and I’ve heard he has interfered with B.S.A.A. operations on more than one occasion.*

Jessica: *It seems that way, but I haven’t had any contact with him since I moved here, so I don’t know much more than that.*

Auditor: *Thank you. Your perspective has been interesting. It’s been very helpful in understanding who you are.*

Jessica: *Your welcome. And my reward? Oh yes. Could you approve the leave request I recently submitted?*

Auditor: *.... All right then. But under one condition – you turn in some homework.*

Jessica: *Wow, I didn’t know this was a high school. Well then, we have a deal. Look forward to a great report.*

T-Abyss Report:

Well. There are times in this world when a bad thing can yield enormous profits. Maybe it is because human nature is a slippery slope, but... A viral weapon is one of them.

The 't-Virus' is a name that may sound familiar to many of you. It was developed by the Umbrella Corporation, a pharmaceutical giant. They are a household name in the industry.

The t-Virus has the unique ability to alter the genetic makeup of other organisms. The best example of this is the phenomenon known as the 'zombie' infection of the human body. The true purpose for the development of this nightmarish virus was to create genetically engineered bioweapons known as 'B.O.W.' and use them to monopolise the military industry.

Hunter.

Nemesis.

Tyrant.

A number of B.O.W.s have been developed over the years. The unrelenting ambition of researchers - if that's the right word - has never ceased. Even today, when the Umbrella Corporation has already collapsed, research and development of viral weapons must still be underway somewhere in the world. And now a viral weapon has been created that can best be described as an improved version of the t-Virus. That weapon is 't-Abyss', which was used during the Terragrigia Panic. The t-Abyss is a genetic hybrid of the t-Virus and 'The Abyss', a new virus discovered during deep-sea exploration. The t-Abyss is still a mystery at this stage, and I've had the privilege of obtaining valuable data on its infected cases.

'Ooze'... That is what they call people infected with t-Abyss. It means 'dripping thing.' I agree with the sensibilities of the researchers who named them for they look like drowned, bloated corpses. The peculiarity of the Ooze is that they are, above all else, unique. They use the flexibility of their bodies to move through various crevices and spaces in pursuit of their prey. Their behavioural patterns are unpredictable, and the Ooze is driven by an instinctive need to stay hydrated. It is assumed that t-Abyss in the body consumes excessive fluids during proliferation. Instead of feeding on flesh, they consume the blood and fluids of their prey. This is a major distinction between a zombieified person infected with the t-Virus. Their leech-like mouth organ is a tongue evolved for blood sucking. Once their prey is captured, the Ooze bites down with this tongue and sucks out the bodily fluids. There are hundreds of tiny fangs on the surface of the tongue's tip, each operating independently. With these fangs, the Ooze slices through its prey's skin, consuming the blood and bodily fluids.

This is a mutant form of an infected individual called 'Skagdead.' These cases usually occur in individuals who are more resistant to the virus than normal and is thought to be a special mutation resulting from the virus taking longer than usual to invade the body. The ratio is approximately one in a thousand. But there is a limit to luck. Unfortunately, no, perhaps fortunately, we don't believe they have any consciousness. They just mumble nonsensical words over and over again like a mechanical doll whose circuits have failed. They are extremely durable. Their bloated body surface has the effect of minimising damage to vital organs required for functionality.

## Data on Mutated Species of Infected Persons #2

The 'Sea Creeper', like the name suggests, is literally an aquatic creature and ruling underwater is her sole domain. Yes, the Sea Creeper mutation is referred to as 'she' because it is only expressed in some infected females possessing the XX type chromosome.

The seekers who creep through the water...

She uses her six arms, multiplied by the virus, to capture her prey and feed on them using her entire body. There is no way to escape her embrace. None.

It is difficult to detect a Sea Creeper lurking in the water, but with the help of bio-scanners, we may be able to detect their presence.

This is all the data I have on the t-Abyss virus as I was only able to obtain data on the infected cases.

I've been unable to confirm the existence of a weaponised B.O.W., but given our history, it's not hard to imagine that bioweapons research and development is already underway. The prospect of encountering a new B.O.W. that reflects the genetic influence of marine life... It will be a complete unknown to us. As of now, there is no actual combat data on t-Abyss. If we could get our hands on it, our research would take a huge leap forward.

Jessica Sherawat.

Yeah, I'm not sure this a great report, but I'll send it to you later. I'm sorry, it's almost time for our rendezvous. Let me enjoy my vacation a little.

Okay, bye.

So long as there are people who see a use for bio-weapons, our work is never done. Today's vacation is over. Another mission begins.

As early as tomorrow...

## SAMURAI EDGE A1 STORY

Jill Valentine with 'Samurai Edge' - B.S.A.A. Affiliation

Jill Valentine is a well-known former member of STARS, and now currently belongs to the BSAA. She is one of the 'Original 11', a founding member of the BSAA, which started out as an NGO. She remains an enrolled and active member even after the BSAA became a unit under the jurisdiction of the United Nations.

'Samurai Edge' - A New Challenge

In 2004, the Federation of Pharmaceutical Companies, a trade association of pharmaceutical companies from around the world, established the B.S.A.A. (Bioterrorism Security Assessment Alliance) to fend off the pressure of criticism caused through use of B.O.W.s (Bio-Organic Weapons), for terrorism. These are viral weapons released after the collapse of Umbrella, a former Federation member. The BSAA is a private non-governmental

organisation with the objective of countering bioterrorism. Due to its establishment and purpose of action, it was essential to procure various equipment, including weapons.

The existence of PMCs (Private Military Companies) shows that with the necessary funds, procedures and a few connections, many weapons can be procured even by private groups. The BSAA started procurement with the backing of the Federation of Pharmaceutical Companies, but there was one person who was looking beyond that. This was Quint Cetcham, who joined the BSAA both as an agent and a technician.

Although he did not have a lot of field experience, his extensive experience in receiving, analysing, developing, and providing feedback led him to anticipate that sooner or later there would be a demand for dedicated equipment, and he stressed the need for continuous data collection and research.

This claim was approved by Clive R. O'Brian, the first head of the BSAA, and the "Anti-Bioterrorism Armament Research Project" was launched.

As the name 'research' suggests, the primary focus of this project was not on the development of specialised equipment, but rather on research and accumulation of results. This is said to be due to the fact the BSAA was still a relatively small organisation at the time of its inception, and because there was both legal and practical problems with a private NGO developing weapons, even for the purpose of counter-bioterrorism.

These circumstances are how the project started, but Quint himself was enthusiastic. He decided to start by studying the equipment used by various anti-bioterrorist organisations. At the time, the United States' 'FBC' was the most recognised anti-bioterrorism organisation, but it was also notoriously secretive, and it was impossible to obtain any useful information about its equipment. Needless to say, Quint and the rest of the BSAA had no way of knowing about the existence of the FBC's <Sentinel> project to develop specialised anti-bioterrorism equipment. There were several other organisations that were working to combat bioterrorism, but all of them were mainly still using pre-existing equipment, and therefore none had special equipment that could be the subject of research.

The next area of focus was the study of previous bioterrorism cases. The idea was to study what equipment had been used at bioterrorism incident sites and how it had helped to bring the situation under control.

Amongst those that caught Quint's eye was the Samurai Edge, an M92F-based handgun that had been customized and used by S.T.A.R.S., a special unit within the Raccoon City Police Department. Although S.T.A.R.S. was not formed specifically to fight bio-terrorism, it is said to be one of the organizations that were deeply involved in the tragedy of Raccoon City's annihilation that began with the mansion incident. It was also convenient that Jill Valentine and Chris Redfield, two of the key figures in the BSAA, were part of it.

Quint immediately contacted Jill and borrowed her personal Samurai Edge for research and verification. As a result, he concluded that the Samurai Edge's high accuracy and ease of use would be effective not only in peacetime but also in the field of bioterrorism.

Quint was also intrigued by the fact that the Samurai Edge was not a specially designed model but had been customised to achieve this level of performance. Therefore, Quint decided to

change the base to an M9A1 as a test model and started reproducing the Samurai Edge. Following conclusion of all the analysis, including data accumulation from trial firings, the gun was offered to its original owner, Jill, who was working on the front lines of bioterrorism.

At that time, the grip medallion, the <S.T.A.R.S. R.P.D Special Team> and <CUSTOM SHOP Kendo > engravings were added to the slide, none of which were present during data collection.

This was Quint's playfulness and an episode that really reflected the organisational atmosphere of the early B.S.A.A.

## FILES TRANSLATION

### 1. GENESIS MANUAL VERSION. 1.0.9

#### <What is GENESIS>

*GENESIS is the nickname of a high-performance bio scanner being tested and developed by the Federation of Pharmaceutical Companies. It is capable of detecting and analysing reflections from objects by irradiating them with synchrotron radiation of special wavelengths.*

#### <Vaccine purification>

*Ver. 1.0.4 and later models can generate a simple vaccine from virus analysis data.*

#### <Detection of objects>

*Using synchrotron radiation, it is possible to detect specific objects.*

*A trial version of the system contains data on bullets and medicinal plants.*

*The indicator in the lower right corner of the monitor lights up when a detectable object is nearby.*

*With every 100% analysis rate, one recovery drug is available.*

*The analysis rate obtained from the same type of enemy will decrease with each analysis.*

### 2. ON HANDLING THE NEW PROTOTYPE

*This operation is the first practical deployment of the "Special Subject".*

*The following points must be observed by all personnel involved in the operation!*

*1: Regarding the management of the "special subjects", strictly follow the handling procedures as instructed by the person in charge.*

*2: Always be prepared for the unexpected and take action in accordance with the emergency provision manual.*

*3: Management after the onset of ability manifestation is extremely difficult.*

*Anaesthetics should be administered every hour during transport to maintain a coma.*

*4: The control of the "special subject" prototype has been established.*

*However, the practical application is unknown.*

*In case of loss of control, use the dedicated network to communicate directly to the Operations Center.*

### 3. FLIGHT PLAN

*Type of Flight: Instrument Flight Rules*

*Aircraft Identification: EC6177*

*Aircraft Type: C-1306*

*Departure Point: Redecilla Del Monte Air Force Base*

*Destination: Valkoinen Mokki Airport*

#### 4. BOTANY PLANTS WITH MEDICINAL PROPERTIES - 3RD EDITION

*~Plants with Medicinal Properties - Third Edition*

*Since ancient times mankind has used a variety of plants to heal wounds and diseases.*

*In this book we will take the herb that grow wild in the Arklay Mountains as an example of plants with medicinal properties and provide an overview of them.*

*This bright green herb not only relieves fatigue, but also enhances natural healing power and accelerates the healing process of wounds.*

*It also has a positive effect on the immune system and is very useful in preventing viral infections.*

*It has many medical applications and is now being used in emergency medicine.*

*In order to protect you and your family from the threat of bioterrorism, which has become more frequent in recent years, it is advisable to keep this herb on hand.*

#### 5. THE FBC'S CHARTER

*The FBC was established by the National Biological Defence Act of 2001 as the organisation for the implementation of biological defence in the United States. This document sets forth the authority of the FBC and its personnel to perform their duties.*

*The FBC is solely responsible for national and regional biological defence in relation to U.S. interests and coordinates with public health and biological defence agencies in other countries. Therefore, they must make every effort to ensure the biological safety of the people.*

*The FBC has the authority to establish a framework for research and development related to biological defence and other activities deemed necessary, including providing support and training to its staff in the execution of their duties. They also formulate operations and budgets with the approval of the National Security Council.*

*The Chairman of the FBC is elected by the National Security Council and oversees all FBC personnel. He also serves as Director of the National Biological Defence Community, responsible for coordinating the biological defence sector of the government and centralising strategy formation.*

*He has the right to request assistance from the Secretary of State, the Secretary of Defence, the Director of National Intelligence, the Chairman of the Joint Chiefs of Staff, and other members of the National Biodefense Community in carrying out his activities. Priority for cooperation and support is mandatory, especially in the case of national biological defence.*

#### 6. DAILY COURIER ARTICLE 1

*The London Daily Courier*

*By Donatello Luzzaschi*

*There is a monster haunting Europe. Its name is the FBC.*

*The FBC, or Federal Bioterrorism Commission, was established by the United States to combat bioterrorism. Originally, this organisation is not what you would call a monster. But it is currently under fire in Europe.*

*This is because the FBC has effectively monopolised command of bioterrorism countermeasures in Terragrìa and has refused to allow other nations to intervene.*

*Terragrìa is a futuristic maritime city developed in partnership by the United States and European nations in order to research and develop alternative energy sources. It was built in*

*the Mediterranean Sea as part of a strategy to combat climate change on the part of the Europeans and to provide power to the African continent on the part of the United States. It could be said that until now, Terragrigia has been managed by committee members from both sides without any incident.*

*However, the recent bio-terrorist attack has drastically changed the situation...*

*According to the treaty, the United States and Europe have equal authority in the fight against terrorism, but for the unique circumstance of bioterrorism, the 'FBC is to take the lead in responding.'*

*The FBC was established to deal with bioterrorism, and it always has emergency deployment teams on standby, making it incomparable to the European camp in terms of organisational scale. it was the intention of the United States that they should be the main force in the event of emergency situations.*

*FBC Commissioner Morgan Lansdale, who was assigned to lead the Terragrigia task force, refused to allow the European camp to intervene and announced the FBC would deal with the situation alone. The Europeans, however, insisted that they had the authority to do so, and confronted Mr Lansdale.*

*Although unconfirmed, there are reports that the FBC has suffered heavy casualties.*

*Whether Mr. Lansdale is able to counter bioterrorism and shed his monstrous image by using his skills and intelligence to make informed decisions, remains to be seen by this reporter...*

## 7. DAILY COURIER ARTICLE 2

*The London Daily Courier*

*By Donatello Luzzaschi*

*Is he a monster in disguise?*

*Or is he a modern-day hero who is trying to stamp out bioterrorism?*

*Those who listen to the imposing declaration of FBC Commissioner Morgan Lansdale will be overwhelmed by his intelligent words and piercing gaze.*

*Mr. Lansdale has been engaged in foreign intelligence activities for many years and has been talked about as a monster in the underworld thanks to his charisma.*

*He has been a vocal advocate in Congress about the dangers of bioterrorism and the need for expansions of power being granted to the specialised agencies who deal with it.*

*In doing so, he has solidified his position as Commissioner of the Federal Bioterrorism Committee, also known as the FBC, and brazened onto the stage and the frontline of power.*

*The FBC he created may become an important power player in global public health and biological defence as an organisation with great authority in dealing with bioterrorism.*

*Of course, that will depend on Mr Lansdale's capabilities.*

*A monster? A hero? We look forward to seeing what the future holds for him.*

## 8. SHIP LAYOUT

*Dear Colleagues*

*The Queen Zenobia is equipped with a variety of facilities to make your cruise experience as comfortable as staying in a luxury hotel. We ask all staff to familiarise themselves with these facilities in order to best serve our guests. Below you will find a description of the main facilities. Please make sure you read and understand them.*

*<The Promenade Hall>*

*The hall, with a total area of 1,500 m<sup>2</sup>, is a three-storey structure with a vaulted ceiling, making it one of the most spacious halls on a cruise ship in the world. The interior is Gothic in style, and the ceiling chandeliers create an opulent atmosphere like that of an opera house.*

<Casino>

*Adjacent to the hall is the casino space, which is equipped with a wide range of casino amenities, including table games and slot machines. The casino is open 24 hours a day during operation.*

<Restaurants and Shopping Mall>

*The mall on the promenade is home to a wide variety of restaurants and bars from all over the world, with a focus on design and service. In the space adjacent to the restaurants, there are stores offering a variety of sundries and daily necessities.*

<Emergency Communication Room>

*In case of an emergency, an emergency communication room is located next to the hall. In this event, the hall should be used as a temporary shelter for passengers, and the crew should immediately send a distress signal to the outside world from the emergency communication room.*

<Solarium>

*The solarium, with its retractable glass ceiling, is one of the world's largest indoor swimming pools. It is truly a paradise at sea where many a shipboard romance has been born. Be careful of couples intruding late at night.*

9. DISCARDED MESSAGE

*God, if you are there, please answer me.  
Is this reality? Or is it hell?  
There is no escape.  
We're surrounded by fucking monsters!  
They're all gone.  
There's no one left alive...  
Shit. I can't believe I fell prey to those things!*

10. HISTORY OF THE QUEEN ZENOBIA

*Gross tonnage: 148,000 tons  
Overall Length: 335.8m  
Overall width: 52.3m  
Overall Height: 93.97m  
Power: Electric diesel propulsion  
Passengers: 2200  
Crew: 647*

*Capacity: 90,000 tonnes*

*The flagship of the 'Paraguas Line', the 'Queen Zenobia, was built in 1978. This was the golden age of cruise ships. The ship's interior, reminiscent of the 1930's, is based on a design left by the architect George Trevor before he disappeared and was described by newspaper articles as a source of fascination to many people at the time of its construction.*

*The ship's name, Zenobia, was named after the beautiful queen of ancient Palmyra, who fought against the Romans and was defeated. It became so popular that it was called the "beautiful queen of the Atlantic" among passenger ships of the 20th century.*

*The development of airlines led to the stagnation of ocean bound passenger vessels, and for a time there were whispers he ships would be scrapped. However, in the late 1980s, she and her sister ships were purchased by the Paraguas Line, who converted her power from steam turbines to diesel-electric propulsion and underwent a major renovation that included the*

*construction of a new hold and cabins. The ship was reborn as a luxury cruise liner with state-of-the-art facilities.*

*Since her refurbishment, she has made numerous round the world and South American voyages, and in recent years has been sailing round African nations in a route based in the Mediterranean Sea, offering the joy and happiness of the ocean to many passengers every year.*

*~Queen Zenobia and her History".*

*1995 Edition*

11. NOTE FOUND IN ROOM 303

*Damn it, how did this happen?*

*Monsters are roaming all over and the ship was decimated immediately.*

*A monster in a shape I've never seen before...*

*Their movements seem awkward, but if they catch you, you're in trouble.*

*My friend Hasan was also eaten by this monster.*

*I used my gun to scare the enemy and managed to escape in the nick of time, but If I hadn't been lucky enough to get a shot through the arm, I would have been in danger. It seems that the bones in that monster's arm are fragile.*

*But I don't think I can escape any longer.*

*My leg that was cut hurts...*

*I don't have any bullets left, how am I supposed to survive this...*

12. NOTE LEFT IN FRONT OF EMERGENCY COMMUNICATIONS ROOM

*The Emergency Communications Room is ahead.*

*No entry aside from authorised personnel!*

*If you need a key, please go to the usual store on the promenade.*

*Chief Communications Officer.*

*(A message is scrawled underneath it.)*

*Oh my god, we're in trouble.*

*The ship is full of monsters. It's all over.*

*I'm going to run to the Promenade. There are plenty of shops there, and I won't have to worry about food. If anyone alive sees this, you're welcome to come by anytime. It's the usual place.*

*I'll survive.*

*If you want to survive, you should follow me.*

*Chief Communications Officer.*

13. COMMUNICATION OFFICER'S JOURNAL

*Day 1*

*It was a good decision to hunker down on the promenade. I have enough food to survive.*

*Every now and then I can hear them moving around behind the door. But they don't seem to be able to get in here. Sucks for them.*

*I don't know if the others are safe or not, but I'll do whatever it takes to stay alive.*

*Day 2*

*Shit! I let a monster in. No way.*

*I didn't expect it to come through the ducts, but I was good enough to turn it into mush. It was easy and that's what I get for training so hard. Good work, me. I'm glad I was awake when it came in. From now on, I can't afford to fall asleep...*

*Day 3*

*After what happened yesterday, I can't sleep peacefully... I'm so nervous. I wish I had someone to talk to to take my mind off it.*

*I'm tired, I'm sick.*

*I don't want to catch a cold. I try to stay as still as possible*

*I don't want to lose my strength. Good luck, me.*

*Maybe the fourth day.*

*I was down with a high fever.*

*I was lucky that the monster didn't find me*

*I'm glad. My head is still a bit fuzzy.*

*Is it an infection? I think I've got a bug.*

*I've got a big lump on my neck. It hurts.*

*It's hard to be alone at a time like this. I feel lonely.*

*What day is it...?*

*I'm glad we talked about it.*

*He's a pretty good guy. He has a good sense of humour.*

*Very funny. Laughs a lot.*

*But his face is too close. You're too close.*

*That's what the other side says.*

*But it's too small for me to move.*

*We had a fight.*

*He's eating all the food.*

*He's eating meat on the side. Looks tasty.*

*It's right next to my face. Right next to me.*

*But he won't give it to me. The meat looks good.*

*The meat on his head looks delicious.*

*Take it!*

*I'm going to get my body back.*

*They got me.*

*Not me, not me?*

*Who am I?*

*Save me. I don't want to be saved.*

*Mayday, mayday, mayday.*

*Meh-ch-ch-ch.*

*Meat, meat, meat, meat, meat...*

14. SAFETY PROCEDURES

*Taking into account previous ship-related accidents, this vessel is equipped with advanced and unique maritime safety measures that go beyond those required by the Maritime Safety Convention.*

*All seafarers should read this manual carefully and be prepared for emergencies.*

1. *The Queen Zenobia has dual internal power supply lines installed. In the event of main power supply line failure, the power room at the bottom of the ship will transfer power from the main line to the sub-line, thus ensuring that the entire vessel can be powered.*

2. *Queen Zenobia is equipped with an automatic watertight bulkhead system consisting of vertical and horizontal bulkheads of unique design.*

*In the event of an emergency, the bulkheads can be operated from a control room located at the bottom of the ship, and in the case of minor damage, further flooding can be prevented.*

15. CASINO STAFF REPORT

*I was finally able to find out how to get past the security in the VIP room.*

*I'd always wondered about that room, as it was only open to the richest regulars.*

*I was told that the only way to get past the security was to give the casino girl next to the door a coin.*

*It weighs 107 grams.*

*It's a small price to pay to get into the room.*

16. MYSTERIOUS INSTRUCTIONS

*(It looks like a memo of some kind.)*

*As soon as you board the Queen Zenobia, you are to proceed with your mission as quickly as possible. There is little time left before the arrival of the two targets, and we must not fail in this mission. I ask for your calm judgment and action.*

1. *Securing the room*

*First of all, move to the crew quarters and secure a room. The ship is expected to be a den of unknown monsters. Pay close attention to your surroundings to avoid being spotted by them.*

2. *Preparing the deception*

*The items you have received in advance will be used to create a ruse to confuse the target. Follow the instructions provided in the manual and set them up immediately. After installation, leave the room immediately.*

*Do not leave any traces!*

*The entire purpose of this mission is target confusion. Act quickly and secretly. Do not let the targets find you. Even when approaching them, avoid direct combat and make hiding yourself your primary objective. After that, I'll handle things from here.*

17. (NO CLUES AS TO WHO LEFT THIS NOTE.)

*(It seems to be a note written by someone...)*

*It was an unpleasant mission to be forced into, but stage one is complete.*

*I got the key to the freight elevator, now I can get to the bottom of the ship.*

*This ship... This is the same ship that was used as a terrorist base during the Terragrigia Panic a year ago. As proof, on the foredeck I found the UAV that was used to disperse the virus. And then there's the creepy monsters on board.*

*They just attacked us out of the blue.*

*This is the worst mission ever.*

*My head hurts like hell. It's hard to see out of even one eye and I feel very sick.*

*And my arm is messed up.*

*My right hand is torn in half.*

*It's so bloody you can see the bone; I have to get it fixed somehow.*

*(The rest is blood stained and unreadable.)*

18. (IT LOOKS LIKE A PIECE OF A MANIFESTO)

*Destiny is not an irony.*

*Destiny is a pre-determined and sublime will.*

*Those who do not curse themselves for their defilement are doomed to be devoured by the fangs of hounds.*

*There is no room for pity for the victims.*

*It is the filth that they have created in this world that has made our fangs rusty.*

*Stifle your breath and sharpen your fangs.*

*Stifle your breath and dig your claws in.*

*United under the same cause, our comrades lie low, waiting for the right moment.*

*It is the hounds that are pure, and it is the hounds that will rid the world of impurity.*

*We are not alone.*

*We are the hounds of the pack, we are Veltro.*

*Earl Brinvico*

19. STEAM PIPE MAINTENANCE REPORT

*To all maintenance personnel*

*Steam leakage is occurring in some areas of the ship's bilge passageway due to the release of the pipe joint lid.*

*Since the area near the steam emits strong heat, please adjust the steam as follows when passing through. Two levers are installed in the power room. By operating the levers and aligning the needle of the meter with each letter of the alphabet, you can stop the steam leak at the corresponding point.*

*The corresponding part of the alphabet is as follows*

*A: Machinery maintenance room*

*B: Power room upper floor*

*C: Power room lower floor*

*Note that when you stop the steam in one area, the steam in the other areas will leak again.*

*Please keep this in mind when proceeding with maintenance.*

20. MEMO LEFT IN THE ENGINE ROOM

*Power reactivation requires a coordinated combination of forces.*

*Simultaneous activation is required. Two keys must be turned at the same time.*

*And one of the reboot keys has been carefully stored in the "special place".*

*Have you got that?*

*In short, the key word for the power room is "mesh".*

21. VELTRO AGENT'S JOURNAL 1

*One day in 2004*

*Our long-cherished dream, the final mission, is finally underway.*

*When our leader, Jack Norman, told us the outline of the mission, we could not believe our ears, but this monumental operation will soon become a reality. This is due to the iron will of His Excellency and his collaborator who has responded to his ideals.*

*It is said that the operation will be carried out on disguised luxury cruise liners, provided by this financial benefactor. It is ironic that these luxury liners, a symbol of fallen human civilisation, will be the source of the virus dispersal. I have been given the task of being present at the seizure of one of the passenger ships, the Queen Zenobia.*

*Bernard Corti*

*2004, 12 hours before mission launch*

*I can't stop the shiver that rises inside me. It's both excitement and fear.*

*In a research facility hidden deep in the bowels of this cruise ship, an array of strange biological weapons produced by experimentation with a new virus are crawling about...*

*The new virus is water soluble and can be transmitted through drinking water, turning people into monsters.*

*The B.O.W. hunter type B.O.W.s provided separately will control the ground, and we will take advantage of the chaos to spread the virus... This mission will surely turn that ugly and lustful maritime city into hell.*

*If we don't make it hell on earth, people's eyes will remain closed. So said Norman.*

*The silver-bearded benefactor must have shared his belief.*

*And so do we.*

*Bernard Corti*

22. SUICIDE NOTE

*(The handwriting is thin and shaky)*

*It seems that our time has run out.*

*I have only one bullet left. There is nothing left to fight for.*

*Let me use the last bullet for myself.*

*Farewell my friend.*

23. RESEARCHING THE DEEP-SEA VIRUS

*The fourth expedition to the Kermadec Trench by an unmanned deep-sea probe, led by the Montpellier Marine University laboratory, has discovered a new species of predatory deep-sea fish in the ultra-deep-water layer at a depth of 9,000 metres.*

*This deep-sea fish has a unique combination of incredibly high swimming ability and ferociousness, even though it lives in a highly pressurised environment that has a significant impact on its biology.*

*Research analysis has led to the conclusion that this extraordinary vitality is not unique to deep-sea fish but is due to a new species of ichthyopathogenic virus that has been discovered.*

*The virus is named 'The Abyss,' after the word "deep," and it was decided to continue the research in secret.*

*The Abyss transformed the body of a deep-sea fish, originally high in fat and water reserves, rendering it suitable for high water pressure, low temperature environments, through creation*

*of a highly dense skeleton with muscular strength that is impossible to be found in deep-sea habitats.*

*If this works well, the sphere of B.O.W. activity will surely expand exponentially.*

*Regarding the infection capacity of 'The Abyss', it has been found that when transmitted through blood it has an infection probability of 99.76%.*

*Although very rare, in some cases the virus is not transmitted to humans through oral ingestion.*

*We have continued our research to make this incredible virus more powerful.*

*(The rest of the text is too abrasive to read\_)*

#### 24. NEW-TYPE VIRUS DEVELOPMENT REPORT

*When genetic analysis of the newly discovered virus, The Abyss, was nearing completion, the research institute of an international pharmaceutical company offered its cooperation through the channels of a certain national organisation.*

*Their proposal was to develop an improved version of the virus, incorporating the Abyss into a weaponised virus called the t-virus.*

*Once the new virus is completed, it will be easier to create B.O.W.s based on the genes of marine organisms.*

*This would open another door to the development of biological weapons.*

*However, research into the development of the new virus has been difficult.*

*The t-virus gene is capable of cross-species infection of all living things, including humans.*

*However, the powerful mutation speed derived from The Abyss was too fast for the infected individuals to withstand, and their physical tissues collapsed. This problem was solved by deliberately suppressing the activity of the virus in the early stages of infection and allowing it to settle in over time.*

*There was also an unexpected by-product.*

*Although it did not disintegrate, the body of the individual affected by the new virus became half liquefied and even the bone tissue mutated.*

*This made the infected body malleable, allowing it to emerge like a phantom from even the smallest gap and attack its target. In addition, there is a variant where dissolved bone material has flowed into the outer skin, hardening the limbs, and turning them into sharp weapons.*

*Because of these characteristics, the human body infected with the new virus has been named 'Ooze,' meaning 'dripping thing.' Although their form is barely humanoid, they have no semblance of their former life, and can best be described as deformed monsters.*

*The virus is getting closer and closer to completion through experiments on infected experimental subjects. However, in the business of biological warfare, a virus is incomplete as a product without the development of a vaccine counterpart.*

*In order to achieve this, a large amount of clinical data is needed. Finding antibodies in a small number of sample experiments is a matter of luck and very time-consuming.*

*In the upper echelons, there is even a hard-line argument that an artificial pandemic is necessary.*

*That would be what we today call bioterrorism...*

#### 25. COMPLETION OF THE NEW-TYPE VIRUS

*We have created the 't-Abyss'.*

*It is a genetic combination of The Abyss and the t-Virus.*

*It is not something to be proud of, given the threat it poses, but it is also true that we have pioneered a new field of marine viral weaponry. However, if this was to go down in history as the greatest weapon ever, I would have mixed feelings...*

*If a concentrated solution of the virus is released into the sea exceeding a certain amount, the research predicts it would cause a chain reaction of infections in all marine organisms, including bacteria living in the vicinity, and contaminate the entire ocean in a very short space of time.*

*A t-Abyss contaminated ocean would transform its ecosystem. It is hard to comprehend how much damage this would do to humanity and the entire global environment.*

*Can we really say that this is part of the research to prevent bioterrorism?*

## 26. VELTRO AGENT'S JOURNAL 2

*One day in 2004, Day 03 of the operation*

*The mission was a success.*

*Hell has reared its ugly head in Terragrigia.*

*The city is about to be destroyed by the spread of the virus and its biohazard.*

*FBC troops were deployed, but their results in this war were nothing in the face of the biological weapons.*

*We, Veltro, have accomplished our goal.*

*The time has come for humanity to realize that this world is hell.*

*People, open your eyes!*

*Cast your eyes on the truth of this world!*

*Bernard Corti*

*One day in 2004, Day 06 of the operation*

*A biohazard has broken out on board...*

*The virus has turned our comrades into monsters one after the other, and the chain of monsters giving birth to monsters continues. Why?*

*We were not meant to be the ones going through hell!*

*I've just received word that the situation on Semiramis is the same.*

*All ships leaking the virus at the same time...*

*I don't think it's a coincidence.*

*It was a set-up from the start.*

*Yes. We've been fools.*

*But who could it be?*

*We, Veltro, have no traitor in our midst.*

*It must be the benefactor, the man with the silver beard.*

*He is the only one who is not here.*

*What are we to do? Your Excellency Norman!*

*Lead us to...*

*(The paper is torn in the middle)*

## 27. MALACODA DEVELOPMENT MATERIALS

*The development of the "Malacoda" code name started by sheer coincidence. In the course of our B.O.W. research on marine organisms, we conducted t-Abyss infection experiments on various fish, one of which was infected with saltwater ich.*

*Saltwater ich, also known as white spot disease, is a common marine disease caused by the parasite called Benedenia (monogenean: Capsalidae).*

*Malacoda larvae are small, about 1cm in diameter. When infecting the host with its small body, the larvae first secrete a special body fluid that infects the host with the virus. The larva then grows into an adult, enlarging itself as well as the host and becoming huge.*

*The size of the adult, which is thought to be a synergistic effect of t-Abyss and fluid secretions to boost metabolism, depends on the size of the host. There are no experimental cases because of the dangers involved, but if the host were a giant creature such as a cetacean, it is hard to imagine how big the organism would grow.*

## 28. INFECTION LOG FOR QUEEN ZENOBIA

*Researcher Ryan  
ID:503321*

*A certain day in 2004*

*We recovered the ship just as the Terragrigia Panic was declared over.*

*The mission was carried out quickly and covertly.*

*Unnoticed by anyone...*

*That land disappeared thanks to the Regia Solis.*

*Now, this ship is an invaluable testing ground where we can observe the process of infection, mutation, and other aspects of 't-Abyss.'*

*We cannot let it go.*

*However, the ship is already a nest of t-Abyss infectants. It has been extremely difficult to gain control. Even now, we have only been able to set up a temporary research base here.*

*Soon this place will be invaded by the monsters.*

*We have little time left...*

*A certain day in 2005*

*Progress observation of the virus is going well, and the special antiviral vaccine was completed.*

*We have no further use for this place.*

*As of today, we have decided to abandon this facility and withdraw.*

*There have been some losses to our research staff, but I think we can resign ourselves to the belief this was a necessary sacrifice.*

*Morgan Lansdale, the ever-calm, silver-bearded gentleman, will be delighted to report that the vaccine is ready.*

*(After several pages of the journal are torn out, there is a scribbled entry.)*

*-As soon as the research data was transmitted, all the doors to the facility were sealed and the B.O.W.s began to revive from their cryo-sleep.*

*I don't know why I didn't realize that Veltra wasn't the only pawn to be discarded... On the other hand, it makes me laugh.*

*In hindsight, this whole thing was in his hands...*

*He provided the terrorists with t-Abyss to cause the Terragrigia Panic and secured a large amount of clinical data on human infection. This brought a ray of light to the slow development of a vaccine.*

*In the meantime, he took the lead in bringing the situation under control, and finally employed the Regia Solis to eliminate all traces of his involvement with the city, let alone the virus and Veltra.*

*As a result, he was able to win over public opinion about the threat of the virus, and even elevated the power of the FBC.*

*A performer in his own play. There is no other case in history where such a word is more appropriate.*

*I am astonished at Mr. Lansdale's capabilities.*

*And when our lives disappear, the truth will be completely buried in darkness...*

*(The text is so indistinct that the rest is unreadable.)*

## 29. MYSTERIOUS JOURNAL

*At last, he made his move.*

*I can't tell you how long I've been waiting for this day.*

*The mission must be a success.*

*I've given up everything for this moment.*

*We had to bring Veltro back to life to shake Morgan and expose evidence of the truth.*

*When O'Brien told me about the plan, I knew it was a risky and reckless gamble, but it was also true that we had no choice but to take a hard-line approach.*

*We disguised a hideout in the mountains of Scandinavia, and, through our sources, we dared to inform the BSAA of rumours that the resurrected Veltro was planning a new terrorist attack. At about the same time as the BSAA began its investigation, there was a flurry of activity around Morgan.*

*Perhaps it was his dog that told him.*

*Morgan is a paranoid and cautious person.*

*Even if we had passed the information directly to the FBC, things would not have worked out this way.*

*It's what the Orientals call a conniving man who drowns in deceit.*

*I had succeeded in taking Queen Zenobia.*

*They were afraid that Veltro would target the ship, so they wanted to transfer it for detonation.*

*But there is no conclusive evidence left here.*

*From here, I will have to take the stage in this grand opera myself.*

*I must gather the members of the BSAA at the Queen Zenobia, and before them, I must play the gas mask role and prove that Veltro is real.*

*Any spy who believes Veltro is real will contact Morgan.*

*That will present an opening.*

*O'Brien reports that there are also signs that they have attacked the disguised hideout.*

*This operation is going to be fluid. In light of certain situations, we will be forced to make some tough decisions.*

*But I will see this through.*

*Even if it means losing my life.*

## 30. DANTE ALIGHIERI'S LA DIVINIA COMMEDIA. AN OFFERING TO THE DEAD

Dante Alighieri's La Divinia Commedia. An offering to the dead.

*(Lines are drawn through part of the open book.)*

*Howl the rain maketh them like unto dogs;*

*One side they make a shelter for the other;*

*Ofit turn themselves the wretched reprobates.  
Dante Alighieri's La Divina Commedia.  
Inferno Canto VI*

*(The words are written in broken handwriting on the edge of the page \_\_\_)*

*The life I have given to the doctrine is always with the great Jack Norman*

31. CLEANING REPORT FOR NEXT ON DUTY

*March 25th*

*There were barnacle-like things stuck to the bottom of the pool.  
I don't know where they came from, but we can't leave them there.  
Please take care of it.*

*March 30*

*The barnacles that we had exterminated have been found again.  
They seemed to have gathered together to form a colony.  
Are they a new species?  
It would be interesting to keep them.*

*April 10th*

*Apparently, there was a defect in the pipe that distributes the water.  
It's been repaired, but there's a possibility that a foreign substance has been mixed in here for a while. The man in charge of the security section was very upset..  
Is it something to do with that new species?*

*Oh shit, no!*

*That is not a new species.*

*(The letter ends here.)*

32. A SCRIBBLED MEMO

*Dearest friend*

*I am at my wit's end. I'm sorry, but I have to go on.  
They are just sleeping.  
But they will wake up again.  
But now is the time...  
The mere thought of it makes me shudder.  
They are hideous, hard to believe they are from this world.  
The unbearable smell of rotten entrails.  
The screams that seemed to come from the depths of hell.  
Its terrifying... and what's more horrible is that I still cannot stop shaking.  
Read with all your heart.  
Those goddamn blisters on the wall.  
They are... eggs for reproduction.  
Please don't think I've abandoned you.  
It's the only way.  
I want to live and see my family...*

*I wish you well, my friend.*

1. SCARMIGLIONE DEVELOPMENT DOCUMENT

*Scarmiglione is a B.O.W. that utilises shark DNA, which has been regarded as promising since the beginning of development. Sharks have been perfected as predators in the sea for hundreds of millions of years without morphological change. The fact that it incorporates their DNA alone promises ferocity and aggressiveness as a weapon.*

*The shape of the Scarmiglione retains the form of its shark ancestor, but with both arms and legs that protrude like spears.*

*These are the spines unique to cartilaginous fishes and are a result of portions of the placoid scales transforming and combining with strong muscle fibres. This allows it to perform thrusting attacks and move with the agility of a land animal.*

*The changes in the placoid scales do not stop there. In terms of strength, it is comparable to the front plating of an armoured car and is incomparable to that of a shark. As a result, it has succeeded in gaining a high rate of defence that practically makes it invincible against frontal attacks.*

TRANSLATOR'S NOTES:

\*The music that plays during the interview segment in Jessica's Report is Excella Gionne's theme from Resident Evil 5, suggesting the GPC auditor is in fact Excella herself.
